

Product Information Sheet

Product	Description
---------	-------------

Microporous fabric is composed by nonwoven laminated breathable microporous film. The microporous size is smaller than water drop and larger than moisture vapor to hold out liquid and blood penetration.

The innovated microporous fabric offers a good barrier to biological infective agents to be widely applied at medical, industrial and consumer products, such as: protective clothing, gowns, patient suits, coveralls, boots, aprons, rainwears, car covers, pillowcases and mattresses.

Product Informations:

Color	White Navy Orange Custom Color
Material	SF/SFS Spunbond Non-woven Laminated Microporous Film
Weight(gsm)	50 to 80gsm
Width	Machine Width 3.2metre, production width per request for different final products
Treatment	Antistatic/Fluid Resistance /Anti Blood penetration
ITEM	CSL200, CSL300

Features&Benefits:

- Help to meet regulatory US and European standards ASTM1670 /EN1149-5 /EN14126/EN13034
- With a barrier against liquids/blood penetration
- Breathable Protective Laminate to infective agents
- Durable and good abrasion resistance
- Applications for Type 5/6 and 5B/6B
