

CONETEX

Product Information Sheet

Product Description

PP/PE Laminated fabric is composed by nonwoven laminated Plastic PE film.

The Laminated fabric offers a good barrier to biological infective agents to be widely applied at medical, industrial and consumer products, such as: protective clothing, gowns, patient suits, coveralls, boots, aprons, rainwears, car covers, pillowcases and mattresses.

Product Informations:

Color	White Blue Yellow Custom Color
Material	SPE Spunbond Non-woven Laminated PE Film
Weight(gsm)	30 to 50gsm
Width	Machine Width 3.2metre,production width per requestion for different final products
Treatment	Fluid Resistance /Anti Blood penetration
ITEM	CSL100

Features&Benefits:

- Help to meet regulatory US and European standards AAMI LEVEL1-4,EN13795
- With a barrier against liquids/blood penetration
- Strong protective Laminate to infective agents
- Durable and good abrasion resistance
- Applications for bed sheet,isolation gown,drapes etc products
